Our Canadian neighbors take some interest in politics on this side of the lake. A captain of a Canadian vessel trading at this port inquired of a gentleman, a few days since, with whom he was doing some business, as to whom the two parties had nominated for President. THE WHIG PLATFORM.

The Whigs of the United States, in Convention assembled, firmly adhering to the great conserva-tive republican principles by which they are con-trolled and governed, and now, as ever, relying upon the intelligence of the American people, with an abiding confidence in their capacity for selfgovernment and their continued devotion to the constitution and the Union, do proclaim the following as the political sentiments and determinations for the establishment and maintenance of Irish citizens, taken in arms against the British, which their national organization as a party is

That, while struggling freedom everywhere enlists the warmest sympathy of the Whig party, we still adhere to the doctrines of the Father of his Country, as announced in his Farewell Address, of keeping ourselves free from all entangling alliances with foreign countries, and of never quitting our own to stand upon foreign ground. That our mission as a republic is not to propagate our opinions, or impose on other countries our form of government by artifice or force, but to teach by example, and show, by our suc-cess, moderation, and justice, the blessings of self-government and the advantages of free in-

Protection from Lightning.

Protection from Lightning.

The undersigned, being the duly appointed Agent of Spratt's Rigoratican and Electron-Matallusous Lightning on Manuacrosty, Covingion, Kentucky, begs to offer these superior Rods, of Spiral-twisted, Carbonized Annealed Iron, with Zine Protectors, and Electro-positive elements combined in their manufacture; thus rendering them equal to copper as conductors. They are in ten-feet lengths, with accurately-fitted brass-screw connecting joints, an entire new style of metallic (patented) attachments, for brick or frame buildings; also, glass isolators, of a novel and ingenious construction, (patented,) forming a lock; the whole mounted with a solid platinum silver point, (patented,) twelve inches long, surrounded at the base with three angular negative magnets, which possess the power, to an extraordinary extent, of discharging the opposite elements of the most fearful thunderstorm, and embrace the entire perfection of science up to the present time; the whole constituting the most magnificent and perfect silent conductor ever presented to the public.

Safety has not been compromised by affording these excellent rods at such low rates; the greatest attention has been given to their construction, so as to be readily attached. The astonishing power of the negative magnets, in discharging the air of its opposite elements, has been clearly demonstrated by the Electrometer, when unmagnetized points have shown but slight results, though placed under the same conditions. In fact, they gather and silently discharge electricity from the atmosphere when you would scarcely suspect any being present.

These improvements being secured by double letters patents.

Washington City.

I do hereby certify that I have app lied various powerful chemical re-agents to Spratt's Patent Points for Lightning Rods, and that the results of these experiments convince me that they will resist the action of atmospheric causes, and thereby preserve the extremity sharp—a condition most essential to protection against lightning. The re-agents used in the above experiments were a solution of chloride of sodium, (common sait), acctic acid, sulphuric acid, and hydrochloric acid. With the first, there was no action on the metal; with the several acids, there was vory slight—a fact sufficient to show that atmospheric influences would have no sensible effect.

JOHN LECONTE, Prof. of Nat. Phfl. et Chem.

UNIVERSITY OF GA., October 8, 1850.

The Lightning Conductors of Mr. Spratt, offered to me, are well calculated to perform the office for which they are intended. Yours, truly, Prof. ROBT. PETER.

LEXINGTON, KY., February 20, 1850.

CHICAGO, September 3, 1850.

This may certify that I have examined, somewhat critically, James Spratt's Patent Lightning Rods, and that I am of opinion that it is constructed on scientific principles. For combining durability, cheapness, and efficacy, I deem it equal, and I think superior, to any other rod ever offered for my inspection.

Augusts. (It a New 22. BLANEY.

Augusta, (Ga.) November 11, 1850. Augusta, (Ga.) November 11, 1850.

This will certify that I have examined the Lightning Rods, Metallic Points, and Isolating Attachments, manufactured by Mr. Spratt, and regard them as constructed in conformity to the general laws of the electric fluid; and the metallic compound constituting the Points, as promising, from the result of several tests to which they were submitted, to resist for years the action of those atmospheric causes most likely to corrode them.

A. MEANS,

Pharm., Medical College, Ga.

The Lightning Conductors put up by Mr. Henry M. Smith, of this city, on the plan of Mr. Spratt, appear to me to be very well devised; and, in point of mechanical construction, are the best I have ever seen.

It is to be hoped that the use of these Rods may become general, as an important auxiliary defence against a danger which must be regarded as of no ordinary magnitude, to which all buildings are liable.
